**The River Systems of America, Extended From The Designs of Professeur Berghaus;  
With the Addition of Detailed Maps of some of the principal hydrographical phenomena  
in the New World . . . 1855**

**Stock#:** 97402  
**Map Maker:** Johnston  
  
**Date:** 1855  
**Place:** Edinburgh  
**Color:** Hand Colored  
**Condition:** VG  
**Size:** 23 x 18.5 inches  
  
**Price:** \$ 225.00

**Description:**

Fascinating composite of maps of North America, South America and three river systems in America, which appeared in Johnston's Physical Atlas.

The map is color coded to show the wider regions into which various rivers systems drain.

The explanatory note states:

*In this Map . . . the areas of the River Basins are stated in Geographical Square Miles, and each is compared with. that of the R.Pregel (Prussia) which is reckoned = 1.; nearly corresponding with this is the Basin of the R. Motagua, one of the principal streams in Central America, the extent of which is 7,040, while that of the Pregel is 5,920 Sq. Miles. The figures placed over the name of a Basin show the extent of its surface in square miles, and those under it, its extent as compared with the Pregel For example, the Basin of the Orinoco is 252,000 Square Miles in extent, and 42 times greater than that of the Pregel. The greater part of these figures can only be considered as an approximation to the truth.*
