**Silicon Valley Map and 1992 Calendar**

Technology Federal Credit Union, initially christened as Fairchild Semiconductor Federal Credit Union, commenced its operation on May 27, 196

By 1970, the credit union had grown to 6,320 members and \$3.5 million in assets. The 1980s heralded a period of exponential growth in Silicon Valley, and the credit union mirrored this expansion. In a strategic move, it rebranded itself as **Technology Federal Credit Union**, widening its membership to embrace employees from various technology companies, a visionary step that propelled its assets to \$50 million.

In 1996, it distinguished itself by establishing an online presence, one of the first among its peers nationwide. Now known as Technology Credit Union (Tech CU), introduced its pioneering "Anytime: Anywhere" delivery system, thereby revolutionizing the way members interacted with their financial services, ensuring access to account information from their homes, be it through telephone or the internet.
