**Date:** 1827  
**Place:** Paris  
**Color:** Outline Color  
**Condition:** VG+  
**Size:** 33 x 22.5 inches  
**Price:** SOLD

### Description:

Nice example of the 1827 edition of Brue's map of map of North America, described at length by Wheat in his seminal book on the Mapping of the Transmississippi West (Wheat 335).

The map is a marvelous post-Lewis & Clark production, combining excellent detail from the expedition in the Northwest with information from Pike, Humboldt, and others. The "Phillipe ou Rio del Colorado" flows from Monterey to both Lake Teguayo and Timpanago and then onward even further toward the Rocky Mountains. The map has excellent detail in Texas.

The map includes remarkable Indian details. The missions of Upper California are named. The Rocky Mountains are shown as a single Cordillera, as described by Humboldt. Excellent detail in western Canada and Russian America.

The first edition of this map (1821--unknown to Wheat) is rare on the market, with no example being offered in a dealer catalog in over 10 years.

The map was extensively revised between editions, reflecting changes in the borders and knowledge of the Transmississippi west.

A fine example of this rare 2-sheet map.
